

Ocean's 11 Golf App

Product Requirements Document (PRD)

Version 1.0 – Approved for Development

1. Product Vision

Ocean's 11 is a mobile golf scoring application built specifically for golfers who play the Ocean's 11 game.

The application eliminates manual calculations by automatically applying handicap strokes, calculating net results versus par, enforcing Ocean's 11 counting rules, and maintaining a live leaderboard.

The application is designed for speed and simplicity during a round of golf.

2. Product Philosophy

Ocean's 11 is a scoring utility.

It is NOT:

- A golf management platform
- A handicap system
- A statistics platform
- A betting platform

Primary Objective:

A foursome should be able to enter and score a hole in under 30 seconds.

3. Primary User

Single-device scorekeeper.

Characteristics:

- One golfer operates the app

- Keeps score for the entire group
 - Minimal taps required
 - Fast score entry required
-

4. V1 Scope

Included:

- Course management
- Round creation
- Handicap stroke allocation
- Gross score entry
- Ocean's 11 scoring
- Live leaderboard
- Hole editing
- Automatic count enforcement

Excluded:

- GHIN integration
 - User accounts
 - Cloud sync
 - Round history
 - Statistics
 - Betting
 - Social features
 - GPS
 - Score posting
-

5. Core Game Rules

Players

Minimum:

2 players

No maximum player limit.

Handicap Entry

Players enter Course Handicap.

Examples:

- 8
- 14
- 22

The app does not calculate Course Handicap.

Handicap Stroke Allocation

Standard golf allocation.

Example:

Course Handicap = 22

Player receives:

- One stroke on every hole
- Additional stroke on Stroke Index 1–4

Formula:

$\text{base_strokes} = \text{floor}(\text{course_handicap} / 18)$

$\text{extra_strokes} = \text{course_handicap} \bmod 18$

$\text{strokes_received} = \text{base_strokes}$

if $\text{stroke_index} \leq \text{extra_strokes}$

$\text{strokes_received} += 1$

Net Score

$\text{Net Score} = \text{Gross Score} - \text{Handicap Strokes Received}$

Result Versus Par

Result = Net Score – Par

Examples:

-2

-1

E

+1

+2

6. Ocean's 11 Rules

Each player must finish with exactly 11 counted holes.

For every hole:

- Counted
- Not Counted

Selections remain editable throughout the round.

Maximum Count Rule

A player may never exceed 11 counted holes.

Attempts to create a 12th counted hole are rejected.

Automatic Count Rule

Definitions:

Counted Holes = Current counted holes

Needed = 11 – Counted Holes

Remaining = Holes not yet played

If:

Needed = Remaining

Then:

All remaining holes automatically become counted.

Auto-Count Editing Rule

Auto-counted holes may be changed only if the player can still mathematically reach exactly 11 counted holes.

Recalculation Rule

Any edit to:

- Gross Score
- Counted Status
- Course Handicap

Must immediately trigger:

1. Handicap recalculation
2. Net score recalculation
3. Result recalculation
4. Ocean's 11 score recalculation
5. Count recalculation
6. Auto-count recalculation
7. Leaderboard recalculation

The application never stores calculated totals.

All calculations are derived from current data.

Final Score

Ocean's 11 Score = Sum of Result versus Par for all counted holes.

Lowest score wins.

Ties

Tied scores remain tied.

No tiebreaker logic.

7. Navigation Structure

Home

+1

Counted

Format:

Counted Holes / 11

Examples:

6/11

8/11

11/11

Status

Need X

Need = 11 – Counted Holes

Examples:

Need 5

Need 3

Need 1

Auto

Displayed when:

Needed = Remaining Holes

Locked

Displayed when:

Counted Holes = 11

Example

Player | Score | Counted | Status

Fran | -2 | 6/11 | Need 5

Bob | +1 | 7/11 | Need 4

Steve | E | 8/11 | Auto

Mike | -1 | 11/11 | Locked

Sorting

Sort by Ocean's 11 Score.

Lowest first.

Ties remain tied.

Score Entry Grid

Columns:

Player

Gross

Result

Count

Example:

Fran | 5 | E | ✓

Bob | 4 | -1 | ✓

Steve | 6 | +1 | ○

Mike | 4 | -1 | ✓

Gross Entry

Numeric input.

Optimized for quick entry.

Result

Automatically calculated.

Read-only.

Count

Single-tap toggle.

Counted

Not Counted

Save Behavior

Save Hole performs:

1. Validation
2. Recalculation
3. Auto-count logic
4. Leaderboard update
5. Automatic advance to next hole

No Next Hole button required.

Navigation

Scorecard Icon

Used only for editing previous holes.

Screen 6 – Scorecard

Purpose:

Review and edit previously entered holes.

Not intended for scoring or leaderboard review.

Layout

Completed rounds are not retained.

No round history exists.

11. Recommended Technology

Frontend:

React Native

Database:

SQLite

Architecture:

Local-first

Single-device

No backend required for V1.

12. Acceptance Criteria

The application is complete when:

- ✓ Courses can be created
- ✓ Courses can be edited
- ✓ Courses can be deleted
- ✓ Rounds can be created
- ✓ Scores can be entered
- ✓ Counted holes can be selected
- ✓ Previous holes can be edited

- ✓ Handicap allocation is correct
 - ✓ Ocean's 11 calculations are correct
 - ✓ Auto-count logic works
 - ✓ Leaderboard updates immediately
 - ✓ Final results display correctly
 - ✓ Round completes with no manual calculations
 - ✓ Users can complete an entire round without opening the Scorecard except to correct mistakes
-

13. V1 Success Definition

A golfer can:

1. Create a course once.
2. Start a round in under 60 seconds.
3. Enter scores in under 30 seconds per hole.
4. Correct mistakes easily.
5. Track Ocean's 11 standings live.
6. Determine the winner with zero manual calculations.

If these objectives are met, V1 is considered successfully delivered.
